Contents

Preface xiii
Acknowledgments xvii
Introduction xix
Chapter 1. Environmental Crises in China 1
    China on the Brink of Water Crisis 1
    Severe Water Pollution 1
    Water Shortage 7
    Air Pollution 8
    Climate Change 10
    Other Problems 13
Chapter 2. Bureaucratic Structures on Environmental Protection 16
    Interaction among the Party, the Administration,
    and the Legislature 16
    Central-Level Administrative System on
    Environmental Protection 18
    Weakness in Local Environmental Protection
    Departments 22
    Clash between GDP Growth and Pollution
    Control 26
Environmental Impact of China’s WTO Membership ........................ 29

Chapter 3. Environmental Legal Systems in China ........................ 33
  Basic Environmental Law ........................................ 33
  Specialized Environmental Laws and Regulations ............ 35
  Environmental Dispute Settlement ............................ 36
  Statutory and Enforcement Flaws ............................... 38

Chapter 4. Environmental NGOs and Emerging Civil Society 41
  The Development of Environmental NGOs in China ......... 42
  Greening of Media and Internet ............................... 45
  Political Constraints and Challenges Facing Chinese ENGOs ........................................ 48
  Policy Constraints ............................................. 48
  Weak Capacity Building and Internal Management ............ 50

Chapter 5. China’s Environmental Diplomacy and Soft Power 53
  China’s Environmental Diplomacy .............................. 54
  Soft Power and Institutional Participation .................... 61
    Institution Participation Enhances Soft Power ........... 62
  China’s Active Participation in International Institutions ........................................ 64

Chapter 6. Case Study: Songhua River Toxic Spill Crisis 66
  Review of the Songhua River Pollution Crisis ............... 67
  Who Should Be Responsible? .................................... 69
  Governance Problems Reflected ............................... 73

Chapter 7. Case Study: Taihu Algae Crisis .......................... 76
  Failure of 16-Year Effort to Clean-Up Taihu Lake .......... 77
  Crazy for Gross Domestic Product (GDP) ..................... 78
  Wu Lihong’s Tragedy: Failed Crusade Against Pollution .......... 82
  Possible Solutions ........................................... 85

Chapter 8. Case Study: Beijing Olympics and Air Quality .......... 88
  Smog Casts Shadow over “Green Olympics” ..................... 88
Contents

Questionable “Blue Sky” Achievements ............................... 91
Sources of Air Pollution .................................................. 94
Contingency Measures and Solutions ................................. 96

Chapter 9. China’s Climate Change Politics .......................... 103

China’s Performance in Pre-Kyoto Climate Negotiations ........ 104
Start of International Climate Talks under the UN Framework 104
China’s Negotiation Stance .............................................. 105
China’s Gains from Kyoto Protocol ................................. 107
Diplomatic Scores ......................................................... 108
Support from Developing Countries ............................... 108
Praise from Some Industrialized Countries .................... 108
Soft Power Enhancement through Institutional Participation 109
Economic Gains ............................................................ 110
Huge Lucre from CDM Projects ................................. 110
Optimizing Economic Structure and Accelerating Technology Upgrade 112
Easing Energy Security Anxiety ...................................... 113
Improving Domestic Governance ...................................... 114

“Development First” and China’s Inter-Agency Mechanism on Climate Change .................. 115
National Climate Change Program’s Focus on Development .... 115
Inter-Agency Mechanism on Climate Change .................. 117
Domestic Pressure and China’s Initiative ....................... 119

China’s Future Stance in Post-Kyoto Negotiations ............ 121
Voluntary Targets Instead of Absolute Emission Obligations ............................................. 121
Continued Solidarity with Developing Countries ............. 123
More Attention to Regional Mechanism ............................ 125

Chapter 10. How China Manages and Benefits from CDM Projects ........................................ 127

China’s Huge Potential in CDM Projects ............................. 128
CDM and Foreign Investment Inflow ............................. 128
Politics of China's Environmental Protection

Chinese Government's Revenue from CDM Projects ........................................ 130
Two CDM Cases ................................................................................................ 130
China's Share in Global Carbon Market ......................................................... 131
The Largest Piece of Cake ............................................................................... 132
Rising Value of Emission Reductions .............................................................. 134
Government's Endeavor to Boost CDM Projects ........................................... 136
Procedures of China-Based CDM Projects ....................................................... 138
Project Identification ....................................................................................... 139
Project Design .................................................................................................. 139
Host Country's Approval ................................................................................ 139
Project Validation ............................................................................................ 140
Project Registration ........................................................................................ 140
Project Implementation, Supervision, and Reporting ....................................... 140
Verification and Certification of CERs ............................................................ 140
Issuance of CERs ............................................................................................. 140
Challenges and Obstacles ............................................................................... 141

Chapter 11. Reforms and New Policies ............................................................. 144
New Policies and Initiatives ........................................................................... 144
Suspension of Approval of New Industrial Projects along Major River Systems
(liuyu xianpi) ................................................................................................. 145
Electricity Generated by Renewable Energy to Be Purchased Preferentially .... 145
“Green-Credit Policy” (luse xindai zhengce) ................................................. 146
Establishing Leading Group on Energy Saving and Emission Cutting .......... 147
Using Green Indexes to Measure Officials’ Performances .............................. 148
Establishment of Green Fund ......................................................................... 149
Eco-City Project .............................................................................................. 149
Discussion on Levy of Environmental Tax ..................................................... 150
Establishing Pilot Zone on Resource Efficiency and Environmental Protection . 151
Contents

Promoting “Green Insurance” ............. 152
Elevating SEPA to Full-Fledged Ministry —
Ministry of Environmental Protection .... 153
A Long Way to Go Green ..................... 154

Preface

The environmental conservation has made it to the highest platform in the ruling Chinese Communist Party (CCP). General Secretary Hu Jintao's report to the 17th party congress floated the notion of “conservation culture” for the first time, in the context of the need to “build a comprehensive, well-off society”. The high environmental cost accompanying economic growth tops all other problems, said Hu, in a clear signal that such issues, once marginalized by senior decision-makers, have become a new policy focus.

As widely reported, the country's double-digit economic growth rates have led to serious environmental problems, including worsening air conditions in the cities, rocketing greenhouse-gas emissions, serious water shortage, and pollution as well as desertification and loss of biodiversity. Environmental improvement, however, is not only related to the speed of economic development, but also closely links with the country's political structure and bureaucratic systems. In other words, ecological protection is not only an issue of environmental engineering, technology, and economics, but also a tough political task that has to resort to the improvement of governance and policy adjustment. China's environmental pollution is to a larger extent a political issue concerning ineffective governance rather than the one caused by insufficient technology or fund.
Tackling environmental issues is important not only for its own sake but also for the CCP’s political survival as well as the country’s soft power in the international arena. The experience of Eastern Europe and the Soviet Union shows that growing environmental discontent often served as a catalyst for broader opposition to communist regimes. In China, protests about environmental issues have been growing by 30% annually, and as a result, the Chinese government has been using another catchphrase “coordinated development” (xietao fazhan) to show its increasing attention to sustainable development, reduction of energy consumption, and protection of the environment.

It is unfair to criticize the Chinese government for not making any substantial achievement in ecological protection during the past three decades of reform and opening-up. Starting from nil in early 1970s, China has successfully built up the national regulatory framework of environmental protection with increasing number of employees and a complicated legal system in this area containing specialized environmental laws, instruments, and regulations. More importantly, after new leadership cored by Hu Jintao and Wen Jiabao gradually took paramount power after 2002, the ruling party has enacted a series of fresh administrative initiatives to address the urgent environmental degradation. Such effort picked up its momentum in 2007 after the country experienced a few shocking environmental crises and was expected to soon replace the United States to become the world’s largest greenhouse gas emitter.

As the dazzling economic and social changes in China have imposed substantial impact upon the quality of environmental governance, it is time to review the problems and progress in politics of China’s environmental protection. The book tries to answer the following questions: what are the major environmental problems faced by China nowadays? What are China’s basic political structure and legal system involved in environmental protection and what are the interrelationship and power distribution among major players? What are the fundamental institutional factors that hamper the Chinese government/party from being successful and efficient in controlling pollution? How has the environmental issue influenced China’s foreign policy? How has the participation in international politics influenced China’s domestic environmental governance? What are the new administrative initiatives taken
