The completely revised third edition of this four-volume classic is fully updated and now includes such topics as self-organization and organocatalysis. It describes the most important reaction types, new methods and recent developments. The internationally renowned editors and a plethora of international authors (including Nobel laureate R. Noyori) guarantee high quality content throughout the book. A “must read” for everyone in academia and industry working in this field.

Edited by
B. Cornils, W. A. Herrmann, M. Beller, R. Paciello

Applied Homogeneous Catalysis with Organometallic Compounds
A Comprehensive Handbook in Four Volumes
Third Edition

Boy Cornils has worked at the Ruhrchemie AG in Oberhausen, Germany, where homogeneous catalysis started with the hydroformylation reaction found by Otto Roelen, and with the former Hoechst AG in Frankfurt, Germany. In both locations he was director of the research. He is editor of several bestselling titles.

Wolfgang A. Herrmann is president of the Technical University of Munich and has received several awards for his work in organometallic chemistry, like the Otto-Bayer Medal, the DFG Leibniz Award, the ACS Award in Organometallic Chemistry, Max Planck Research Award, the GDCh Wilhelm Klemm Award and many more. He has authored a plethora of publications and is the editor of numerous bestselling books.

Matthias Beller is director of the Leibniz-Institute for Catalysis and Professor for Catalysis at the University of Rostock. He has received several awards such as the Otto-Roelen Medal, the DFG Leibniz Award, the first European Prize for Sustainable Chemistry, the Emil Fischer Medal and the Wöhler Prize of the German Chemical Society and the Gay-Lussac-Alexander-von-Humboldt Prize.

Rocco Paciello is a research manager at BASF SE in Ludwigshafen, Germany. After experience as a research chemist and assistant plant manager, he became responsible for the homogeneous catalysis group at BASF and has led it for the last fifteen years. The group is focused on finding new technical applications of transition metal catalyzed homogeneous catalysis, such as hydroformylations, carbonylations and hydrogenations.
Edited by Boy Cornils, Wolfgang A. Herrmann, Matthias Beller, and Rocco Paciello

Applied Homogeneous Catalysis with Organometallic Compounds

Third Edition
Contents

List of Contributors XV
Preface to the Third Edition XXIX

Volume 1

1 Introduction 1
Wolfgang A. Herrmann and Boy Cornils
1.1 Historical Pathways 1
1.2 Topical Developments Since Year 2000 9
1.3 Organization of the Third Edition 11
1.4 Historical Glossary 13
References 18

Part A Applied Homogeneous Catalysis 23

2 Hydroformylation 25
2.1 General Aspects 25
Boy Cornils
2.2 Conventional Processes 26
2.3 Aqueous-Phase Process 71
Ernst Wiebus, Klaus Schmid, and Boy Cornils
References 78

3 Carbonylation 91
3.1 Carbonylation: Introduction and General Aspects 91
Matthias Beller
3.2 Carbonylation of Methanol and its Derivatives to Acetic
Acid and Acetic Anhydride 93
Bradley A. Steinhoff and Joseph R. Zoeller
3.3 Alkyne Carbonylation 118
David J. Cole-Hamilton, and Eite Drent
3.4 Aryl-X and Related Carbonylations 145
Matthias Beller
## Contents

### 3.5 Transition Metal-Catalyzed Oxidative Carbonylations
- *Xiao-Feng Wu, Helfried Neumann, and Matthias Beller*
  - Page 149

### 3.6 Alternating Copolymerization with Carbon Monoxide
- *Shingo Ito and Kyoko Nozaki*
  - Page 156

### References
- Page 178

### 4 Polymerization and Copolymerization
- Page 191
  - 4.1 General Aspects
    - *Klaus Beckerle and Jun Okuda*
    - Page 191
  - 4.2 Metallocene-Catalyzed Polyolefins
    - *Walter Kaminsky and Gerrit A. Luinstra*
    - Page 203
  - 4.3 Post- and Non-metallocenes for Olefin Insertion Polymerization
    - *Moritz C. Baier and Stefan Mecking*
    - Page 225
  - 4.4 Polymerization of 1,3-Butadiene with Organometallic Complexes-Based Catalysts
    - *Giovanni Ricci and Giuseppe Leone*
    - Page 248
  - 4.5 Polycarbonates
    - *Leslaw Mleczko, Aurel Wolf, and Alexandra Grosse Böwing*
    - Page 273

### References
- Page 285

### 5 Oligomerization, Cyclooligomerization, Dimerization
- Page 307
  - 5.1 Selective Production of 1-Hexene and 1-Octene
    - *Uwe Rosenthal, Bernd H. Müller, Normen Peulecke, Stephan Peitz, Anina Wöhl, and Wolfgang Müller*
    - Page 307
  - 5.2 Dimerization and Selective Oligomerization – Selected Examples of Industrial Applications
    - *Hélène Olivier-Bourbigou and Lionel Magna*
    - Page 328
  - 5.3 Telomerization of 1,3-Butadiene
    - *Piet W.N.M. van Leeuwen and Mathieu J.-L. Tschan*
    - Page 343
  - 5.4 Cyclotrimerization Reactions of Alkynes
    - *Marko Hapke, Nico Weding, and Karolin Kral*
    - Page 375

### Abbreviations
- Page 392

### References
- Page 392

### Volume 2

### 6 Cross Coupling Reactions
- Page 411
  - 6.1 Coupling Reactions: Introduction and General Aspects
    - *Matthias Beller*
    - Page 411
  - 6.2 Industrial Applications of Palladium-Catalyzed Coupling Reactions
    - *Alejandro Varela-Fernandez and Johannes G. de Vries*
    - Page 413
  - 6.3 Ligand-Enabled Palladium-Catalyzed C—N and C—O Bond Formations from Aryl Halides, Tosylates and Mesylates
    - *Shung Man Wong, Chau Ming So, and Fuk Yee Kwong*
    - Page 435

### References
- Page 459
7 Oxidation 465
  7.1 General Aspects 465
      Joaquim Henrique Teles
  7.2 Aromatic Carboxylic Acids 469
      Walt Partenheimer
  7.3 Oxidation of Olefins to Carbonyl Compounds (Wacker Process) 488
      Reinhard Jira
  7.4 Radical Chain Oxidations 508
      Fabrizio Cavani and Giorgio Strukul
  7.5 Manganese and Iron Bleaching Catalysts 519
      Ronald Hage and Johannes W. de Boer
  7.6 Catalytic Decarbonylative and Decarboxylative Processes 524
      Lukas Gooßen and Patrizia Mamone
  7.7 Oxidation of Phenols 543
      Oxana A. Kholdeeva
References 550

8 Hydrosilylation and Related Reactions of Silicon Compounds 569
   Bogdan Marciniec, Hieronim Maciejewski, Cezary Pietraszuk, and Piotr Pawluć
  8.1 Introduction 569
  8.2 Hydrosilylation of Carbon–Carbon Multiple Bonds 571
  8.3 Chemo- and Enantioselective Hydrosilylation of Unsaturated Carbon–Heteroatom Bonds 592
  8.4 Silicometallics and Catalysis 598
References 605

9 Hydrogenation 621
  9.1 Industrial Application of Asymmetric Hydrogenation 621
      Hans Ulrich Blaser, Benoit Pugin, and Felix Spindler
  9.2 Hydrogenation of Esters 645
      Lionel A. Saudan
Abbreviations 681
References 682

Part B Recent Developments 691

Subpart 1: Catalysts 691

10 New Trends in Organometallic Catalysts 693
  10.1 Iron Catalysis 693
      Kathrin Junge, Gerrit Wienhöfer, and Matthias Beller
  10.2 Copper-Catalyzed Arylation of Nucleophiles: History, Renaissance and Scalable Reactions 744
      Anis Tili, Gwilherm Evano, and Marc Taillefer
  10.3 Rare Earth Metal Catalysts 764
      Rhett Kempe
Contents

10.4  Chiral Frustrated Lewis Pair Catalysts  773
  Christoph Malbertz and Jürgen Klankermayer
References  787

Volume 3

11  New Ligands  809
11.1  N-Heterocyclic Carbenes  809
  Rubén S. Ramón and Steven P. Nolan
11.2  Phosphorus Ligands in Homogeneous Catalysis  828
  Armin Börner and Ralf Jackstell
11.3  Host–Guest Relations and Self-Organization in Homogeneous Catalysis  846
  Frédéric Hapiot and Eric Monflier
11.4  Micellar Catalysis  863
  Michael Schwarze and Reinhard Schomäcker
11.5  Switchable Catalysis  877
  David E. Bergbreiter
11.6  Catalysis with Transition Metal Pincer Complexes  889
  Lukasz T. Pilarski and Kálmán J. Szabó
11.7  Biocatalysis  898
  Robert Kourist and Uwe T. Bornscheuer

Subpart 2: Methods  951

12  Computational Investigations into the Heck Type Reaction Mechanisms  953
  Cai-Hong Guo and Haijun Jiao
12.1  Introduction  953
12.2  Oxidative Addition  954
12.3  Regioselectivity  966
12.4  Stereoselectivity  973
12.5  Alternative Mechanism Involving a Pd(II/IV) Redox System  978
12.6  Concluding Remarks  979
References  980

13  Chemical Reaction Engineering Aspects of Homogeneously Catalyzed Processes  983
  Manfred Baerns and Peter Claus
13.1  Introduction  983
13.2  Kinetics in Homogeneous Catalysis  985
13.3  Aspects of Catalyst Recycling  995
13.4  Symbols  996
References  997
14  Supported Liquid Phase Catalysis  999
    Marco Haumann and Peter Wasserscheid
14.1  Introduction  999
14.2  Support Materials  1000
14.3  Thin Film Coating Materials  1003
14.4  Summary and Outlook  1061
    References  1062

15  Recent Advances in Surface Organometallic Chemistry  1069
    Christophe Copéret and Florent Héroguel
15.1  Introduction  1069
15.2  Strategy and Methods  1069
15.3  A Decade of Development of Single-Site Heterogeneous
    Catalysts  1073
15.4  New Directions  1076
15.5  Challenges and Perspectives  1080
    References  1081

16  High Throughput Screening of Homogeneous Catalysts:
    Selected Trends and Applications in Process Development  1085
    Rocco A. Paciello
16.1  Summary  1094
    References  1095

17  Homogeneous Photocatalysis with Organometallic Compounds  1097
    Norbert Hoffmann
17.1  Introduction  1097
17.2  Metal Carbonyl Catalyzed Reactions  1098
17.3  Copper (I) Catalyzed [2+2] Photocycloadditions
    of Alkenes  1106
17.4  Photochemical Electron Transfer Mediated Reactions  1108
17.5  Photochemically Supported C—H Activation with Organometal
    Compounds  1124
17.6  Conclusions  1128
    References  1129

18  Electrochemical Water Oxidation and Reduction Catalyzed
    by Organometallic Compounds  1135
    Mei Wang and Fei Li
18.1  Introduction  1135
18.2  Electrochemical Water Oxidation to O₂ Catalyzed by Organometallic
    Compounds  1136
18.3  Electrochemical Water Reduction to H₂ Catalyzed by Organometallic
    Compounds  1146
18.4  Concluding Remarks and Outlook  1187
    References  1188
19  Metal-Catalyzed Multicomponent Reactions 1195
Jeffrey S. Quesnel and Bruce A. Arndtsen
19.1  Introduction 1195
19.2  Multicomponent Carbonylation Reactions 1196
19.3  Multicomponent Cross-Coupling Reactions 1203
19.4  Metallacycles in Multicomponent Reactions 1210
19.5  Multicomponent Approaches to 1,3-Dipolar
     Cycloadditions 1215
19.6  Summary and Outlook 1217

Subpart 3:  Special Reactions 1259

21  Carboxylation of Nitroarenes and Aromatic Amines 1261
    Marcus Harrer and Jörg Sundermeyer
21.1  Present Synthesis of Isocyanates via the Phosgene Route 1261
21.2  Alternative Carboxylation Strategies towards Carbonic Acid
     Derivatives 1262
21.3  Overview 1263
21.4  Reductive Carboxylation of Nitroarenes 1264
21.5  Redox Carboxylation of Nitroarenes and Aromatic Amines According
     to (21.4) and (21.5) 1274
21.6  Oxidative Carboxylation of Aromatic Amines According to (21.6)
     and (21.7) 1275
21.7  Summary 1280
     References 1281

22  Pauson–Khand Reaction 1287
    Takanori Shibata
22.1  Introduction 1287
22.2  Co-Catalyzed Reaction 1288
Contents

26.4 Hydroamination Catalysts Based on Alkaline-Earth Metals 1396
26.5 Late Transition-Metal Complexes as Homogeneous Hydroamination Catalysts 1397
26.6 Heterogeneous and Immobilized Hydroamination Catalysts 1408
26.7 Brønsted Acid Catalyzed Hydroamination of Alkenes and Alkynes 1410
26.8 Base-Catalyzed Hydroamination 1412
26.9 Conclusions 1415
Acknowledgments 1417
References 1417

27 Catalytic Amide Bond Forming Methods 1427
Benjamin N. Atkinson, A. Rosie Chhatwal, and Jonathan M.J. Williams
27.1 Amidation of Carboxylic Acids 1427
27.2 Transamidation 1431
27.3 Amidation of Esters 1437
27.4 Amidation of Aldehydes (Without Oxime Intermediates) 1440
27.5 Amidation of Alcohols 1443
27.6 Amidation of Nitriles 1445
27.7 Oxime/Oxime Intermediates to Amides 1449
27.8 Aminocarbonylations 1452
27.9 Miscellaneous Amidations 1456
27.10 Conclusion 1457
References 1458

28 Synthesis of Heterocycles by Pd-catalyzed and Pd-catalysis Initiated Multi-component Reactions 1463
Thomas J. J. Müller
28.1 Introduction 1463
28.2 MCR by Insertion of Allenes 1464
28.3 MCR by Insertion of Carbon Monoxide 1468
28.4 MCR by Insertion of Alkenes and Alkynes 1470
28.5 MCR by Initial Sonogashira Alkynylation 1473
28.6 MCR by Carbonylative Sonogashira Alkynylation 1477
28.7 MCR by Catalytic Enamine Generation and Arylation 1478
28.8 Conclusion 1479
