Three Carbon—Heteroatom Bonds: Thio-, Seleno-, and Tellurocarboxylic Acids and Derivatives; Imidic Acids and Derivatives; Ortho Acid Derivatives
Science of Synthesis

Science of Synthesis is the authoritative and comprehensive reference work for the entire field of organic and organometallic synthesis.

Science of Synthesis presents the important synthetic methods for all classes of compounds and includes:
- Methods critically evaluated by leading scientists
- Background information and detailed experimental procedures
- Schemes and tables which illustrate the reaction scope
Compounds with Four and Three Carbon–Heteroatom Bonds

Three Carbon–Heteroatom Bonds: Thio-, Seleno-, and Tellurocarboxylic Acids and Derivatives; Imidic Acids and Derivatives; Ortho Acid Derivatives

Copyright and all related rights reserved, especially the right of copying and distribution, multiplication and reproduction, as well as of translation. No part of this publication may be reproduced by any process, whether by photostat or microfilm or any other procedure, without previous written consent by the publisher. This also includes the use of electronic media of data processing or reproduction of any kind.

This reference work mentions numerous commercial and proprietary trade names, registered trademarks and the like (not necessarily marked as such), patents, production and manufacturing procedures, registered designs, and designations. The editors and publishers wish to point out very clearly that the present legal situation in respect of these names or designations or trademarks must be carefully examined before making any commercial use of the same. Industrially produced apparatus and equipment are included to a necessarily restricted extent only and any exclusion of products not mentioned in this reference work does not imply that any such selection of exclusion has been based on quality criteria or quality considerations.

Warning! Read carefully the following: Although this reference work has been written by experts, the user must be advised that the handling of chemicals, microorganisms, and chemical apparatus carries potentially life-threatening risks. For example, serious dangers could occur through quantities being incorrectly given. The authors took the utmost care that the quantities and experimental details described herein reflected the current state of the art of science when the work was published. However, the authors, editors, and publishers take no responsibility as to the correctness of the content. Further, scientific knowledge is constantly changing. As new information becomes available, the user must consult it. Although the authors, publishers, and editors took great care in publishing this work, it is possible that typographical errors exist, including errors in the formulas given herein. Therefore, it is imperative that and the responsibility of every user to carefully check whether quantities, experimental details, or other information given herein are correct based on the user's own understanding as a scientist. Scale-up of experimental procedures published in Science of Synthesis carries additional risks. In cases of doubt, the user is strongly advised to seek the opinion of an expert in the field, the publishers, the editors, or the authors. When using the information described herein, the user is ultimately responsible for his or her own actions, as well as the actions of subordinates and assistants, and the consequences arising therefrom.
Preface

As our understanding of the natural world increases, we begin to understand complex phenomena at molecular levels. This level of understanding allows for the design of molecular entities for functions ranging from material science to biology. Such design requires synthesis and, as the structures increase in complexity as a necessity for specificity, puts increasing demands on the level of sophistication of the synthetic methods. Such needs stimulate the improvement of existing methods and, more importantly, the development of new methods. As scientists confront the synthetic problems posed by the molecular targets, they require access to a source of reliable synthetic information. Thus, the need for a new, comprehensive, and critical treatment of synthetic chemistry has become apparent. To meet this challenge, an entirely new edition of the esteemed reference work Houben–Weyl Methods of Organic Chemistry will be published starting in the year 2000.

To reflect the new broader need and focus, this new edition has a new title, Science of Synthesis, Houben–Weyl Methods of Molecular Transformations. Science of Synthesis will benefit from more than 90 years of experience and will continue the tradition of excellence in publishing synthetic chemistry reference works. Science of Synthesis will be a balanced and critical reference work produced by the collaborative efforts of chemists, from both industry and academia, selected by the editorial board. All published results from journals, books, and patent literature from the early 1800s until the year of publication will be considered by our authors, who are among the leading experts in their field. The 48 volumes of Science of Synthesis will provide chemists with the most reliable methods to solve their synthesis problems. Science of Synthesis will be updated periodically and will become a prime source of information for chemists in the 21st century.

Science of Synthesis will be organized in a logical hierarchical system based on the target molecule to be synthesized. The critical coverage of methods will be supported by information intended to help the user choose the most suitable method for their application, thus providing a strong foundation from which to develop a successful synthetic route. Within each category of product, illuminating background information such as history, nomenclature, structure, stability, reactivity, properties, safety, and environmental aspects will be discussed along with a detailed selection of reliable methods. Each method and variation will be accompanied by reaction schemes, tables of examples, experimental procedures, and a background discussion of the scope and limitations of the reaction described.

The policy of the editorial board is to make Science of Synthesis the ultimate tool for the synthetic chemist in the 21st century.

We would like to thank all of our authors for submitting contributions of such outstanding quality, and, also for the dedication and commitment they have shown throughout the entire editorial process.

Preface

Table of Contents

Introduction
André B. Charette

Product Class 1: Thiocarboxylic Acids and Derivatives

Product Subclass 1: α-Substituted Sulfur Ylides
V. K. Aggarwal, J. Richardson, and C. L. Winn

Product Subclass 2: Thioacyl Halides
R. S. Glass

Product Subclass 3: Thioarboxylic O-Acid Esters
R. S. Glass

Product Subclass 4: Dithioarboxylic Acid Esters
R. S. Glass

Product Subclass 5: Selenothioarboxylic Se-Acid Esters
R. S. Glass

Product Subclass 6: Tellurothioarboxylic Te-Acid Esters
R. S. Glass

Product Subclass 7: Thioamides
H. Lebel

Product Class 2: Selenocarboxylic Acids and Derivatives
T. Wirth

Product Class 3: Tellurocarboxylic Acids and Derivatives
T. Murai

Product Class 4: Imidic Acids and Derivatives

Product Subclass 1: Carbon-Substituted Iminium Salts
S. Cicchi and F. M. Cordero

Product Subclass 2: C-Heteroatom-Substituted Nitrones, Other Dipoles
F. M. Cordero and S. Cicchi

Product Subclass 3: Imidoyl (Imino) Halides
N. Nakajima and M. Ubukata

Product Subclass 4: Imidates
N. Nakajima and M. Ubukata
| 22.4.5 | **Product Subclass 5: Thioimidates and Their Derivatives**  
| N. Nakajima and M. Ubukata | 361 |
| 22.4.6 | **Product Subclass 6: Selenoimidates (Imidoselenoates) and Derivatives**  
| N. Nakajima and M. Ubukata | 367 |
| 22.4.7 | **Product Subclass 7: Telluroimidates (Imidotelluroates) and Derivatives**  
| N. Nakajima and M. Ubukata | 375 |
| 22.4.8 | **Product Subclass 8: N-Alkyl-, N-Aryl-, and N-Hetaryl-Substituted Amidines (Imidamides)**  
| K. Ostrowska and A. Kolas | 379 |
| 22.4.9 | **Product Subclass 9: Amidines (Imidamides) N-Substituted by Metals, Halogens, Oxygen, and Other Heteroatoms**  
| K. Ostrowska and A. Kolas | 489 |
| 22.5 | **Product Class 5: 2-Functionalized Alkylidene phosphines**  
| R. A. Aitken | 565 |
| 22.6 | **Product Class 6: 2-Functionalized Arsaalkenes and α-Functionalized Arsonium Ylides**  
| R. A. Aitken | 601 |
| 22.7 | **Product Class 7: Ortho Acid Derivatives**  
| 22.7.1 | **Product Subclass 1: Trihalomethyl Compounds**  
| G. K. S. Prakash and J. Hu | 617 |
| 22.7.2 | **Product Subclass 2: Ortho Esters and Halogenated Derivatives**  
| H. Lebel and M. Grenon | 669 |
| 22.7.3 | **Product Subclass 3: Trithioortho Esters and Halogenated Derivatives**  
| H. Lebel and M. Grenon | 749 |
| 22.7.4 | **Product Subclass 4: Triselenoortho Esters and Halogenated Derivatives**  
| H. Lebel and M. Grenon | 775 |
| 22.7.5 | **Product Subclass 5: Tritelluroortho Esters and Halogenated Derivatives**  
| H. Lebel and M. Grenon | 789 |
| 22.7.6 | **Product Subclass 6: Ortho Amides (Alkane-1,1,1-triamines)**  
| W. Kantlehner | 795 |
| 22.7.7 | **Product Subclass 7: Tris(diorganophosphino)methanes and Derivatives**  
| W. Kantlehner | 843 |

R. S. Glass

22.1.5 Synthesis of Product Subclass 5 ................................................. 133
22.1.5.1 Method 1: Thioacylation of Areneselenolates .......................... 133
22.1.5.1.1 Variation 1: Thioacylation with Thioacyl Chlorides .................. 133
22.1.5.1.2 Variation 2: Thioacylation with Bis(thioacyl) Sulfides ............ 133
22.1.5.1.2 Method 2: Reaction of Thiocarboxylic O-Acid Esters with Dialkylaluminum Alkaneselenolates .................................................. 134
22.1.5.1.3 Method 3: Se-Alkylation of Selenothioates .......................... 134
22.1.5.1.4 Method 4: Sulfuration of a Selanylynamine .......................... 135
22.1.5.2 Applications of Product Subclass 5 in Organic Synthesis ............ 135
22.1.5.2.1 Method 1: Thioacylation ............................................. 135
22.1.5.2.2 Method 2: Alkylation of Enethiolates ................................ 135
22.1.5.2.3 Method 3: Oxidation .................................................. 136
22.1.6 Product Subclass 6: Tellurothiocarboxylic Te-Acid Esters
R. S. Glass

22.1.7 Product Subclass 7: Thioamides
H. Lebel
