*   *   *

The views expressed in this publication are the sole responsibility of the author. They do not necessarily reflect the views or opinions of the United Nations, UNIDIR, its staff members or sponsors.
The United Nations Institute for Disarmament Research (UNIDIR)—an autonomous institute within the United Nations—conducts research on disarmament and security. UNIDIR is based in Geneva, Switzerland, the centre for bilateral and multilateral disarmament and non-proliferation negotiations, and home of the Conference on Disarmament. The Institute explores current issues pertaining to the variety of existing and future armaments, as well as global diplomacy and local tensions and conflicts. Working with researchers, diplomats, government officials, NGOs and other institutions since 1980, UNIDIR acts as a bridge between the research community and governments. UNIDIR’s activities are funded by contributions from governments and donor foundations. The Institute’s web site can be found at:

ACKNOWLEDGEMENTS

Special thanks to Micah Lowenthal, Mohamed Shaker, Björn Skala and Sharon Squassoni who provided useful comments on early drafts of the manuscript.

The author would like to thank his UNIDIR colleagues for their support and advice. Thanks to Theresa Hitchens and Kerstin Vignard for their practical, administrative and managerial advice. Thanks to Jason Powers, who provided excellent editorial assistance, and to Anita Blétry for production assistance. Thanks to Sitraka Andriamanantenasoa who provided excellent assistance at the final stage of drafting the manuscript.

Special thanks to the Governments of Austria, the Russian Federation, Sweden, and the United Kingdom for generously funding the UNIDIR project Multilateral Approaches to the Nuclear Fuel Cycle.
